

When Veneers Won't Cover—Cosmetic Dentist for Greenwood Offers Attractive Alternatives!

Does your smile fail to inspire reciprocation? Dr. Sammons, your cosmetic dentist for Greenwood, knows just what to do to repair crooked, misshapen, or discolored teeth. Abolish social impediments, bolster your self-esteem!

Many patients of Dr. Sammons have aesthetically improved their smile with porcelain veneers. Porcelain veneers are designed to cover imperfections to the frontal portion of a tooth. Chipped, unevenly spaced, or discolored teeth can undergo an exciting and dramatic transformation by applying this procedure. For some however, veneers are not an option. Why is this?

A porcelain veneer is intended purely to serve an aesthetic purpose, and must be able to adhere to a solid surface in order to maintain durability. If a tooth is too decayed or a fracture has occurred within the tooth structure, a veneer won't fix the problem. Similarly, someone in the habit of clenching or grinding their teeth may produce enough force to repeatedly dislodge or damage any veneer a dentist may place. Is all hope of acquiring a dazzling smile lost? Not when our cosmetic dentist for Greenwood is available!

Dr. Sammons offers full coverage crowns that can alter a tooth's size, shape and shade—yet withstand significant bite force! Better yet, by using his in-office CEREC 3D technology these crowns can be designed in a single visit. How will its design differ from that of a porcelain veneer?

A crown is a type of dental restoration that completely caps or encircles a tooth. Where veneers serve a purely aesthetic purpose and therefore are bonded only to the most outwardly visible portion of tooth, crowns go further in providing strength and protection to the whole tooth.

Matching the sheen and color of a natural tooth, Dr. Sammons is the cosmetic dentist providing Greenwood residents with the smile of their dreams! Make your appointment today.
